Concepts & Data: CI/CD, Semantic Web (RDFa), RESTful APIs, PostgreSQL, H2, Responsive UI

TECHNICAL PROJECTS

OnTrack – Document Management System <i>Java 25, Spring Boot, Thymeleaf, H2</i>	Summer 2026
- Designed and developed a web-based Document Management System (DMS) prototype to streamline tracking, verification, and compliance of mandatory legal and safety documentation for contractors and freelancers. - Built a dynamic dashboard featuring real-time expiration alerts, client categorization by typology, and automated checklist generation based on master catalog rules. - Implemented full-stack architecture using Spring Boot and JPA, including file upload/download functionality for PDFs/images and automated database seeding for rapid testing.	
SAT Local Search Solver <i>Python 3, Local Search (WalkSAT)</i>	Mar. 2026 – Apr. 2026
- Developed a high-performance SAT solver using Local Search heuristics (WalkSAT) for the Advanced Programming in AI (APAI) race. - Engineered efficient state tracking mechanisms, utilizing O(1) swap-and-pop techniques to manage unsatisfied clauses and minimize computational overhead during variable flips. - Built under strict constraints (Python 3, zero external libraries) to maximize execution speed and adherence to race environment rules.	
DealHunter <i>Django, Python, PostgreSQL, RDFa, Tailwind CSS</i>	Feb. 2026 – Apr. 2026
- Engineered a full-stack web platform to centralize, compare, and display digital video game offers from multiple sources. - Implemented semantic markup (RDFa) to optimize web scraping efficiency and structure data for search engine indexing. - Designed a responsive UI utilizing Tailwind CSS, integrated with a robust PostgreSQL database architecture.	
AI Creator API <i>FastAPI, Python, Hugging Face, Render</i>	Apr. 2026 – May 2026
- Developed and deployed an experimental backend REST API service for content generation. - Leveraged Hugging Face machine learning models for text processing, including summarization and translation. - Built an interactive front-end using Astro to fetch and display dynamic backend responses.	

WORK EXPERIENCE
